

TIPU

My data, my future.

Meet Edward and his parents, a typical family wanting Edward to succeed in his learning journey.

Like many families, they are overwhelmed and they struggle managing everything digital.

Meet TIPU

The first **family-centric**, secure and ethical digital assistant to support a child's lifelong learning & growth.

TIPU lets Edward's parents gather, analyse and reshare data from schools, hobbies, and activities, while ensuring privacy and control over who accesses it.

Whether contemplating course and career options, getting ready to change schools or start new hobbies, TIPU securely shares his data, easing the burden on families and educators.

TIPU is more than a tool—it uses secure AI to empower children to actively participate in their development. It provides personalised guidance for decisions like university and career paths based on their evolving interests.

Its gamified interface encourages kids to visualise their dreams and aspirations, fostering confidence and ownership over their future.

But it takes a ~~village~~ - an ecosystem - to raise a child!

We're currently looking for piloting partners and funding opportunities to make TIPU fly!

Join us in building a fair future for the next generation.
